All of our products are strictly inspected before shipment & adhere to client specifications. We have made a good reputation in this field & our products have always got good feedback from our customer, So we are looking forward to establishing good business relationship with your

esteemed organization and provide with the best quote and quality available in the Indian market. Most of our products are Halal certified and ISO 22000 certified. Our Objective: Through our businesses, services, and products, we aim to provide our customers with health, excitement, and comfort.

Product Description

Corn Starch from Safe Agritrade

Corn starch is a versatile ingredient used in various culinary preparations, such as soups, sauces, gravies, puddings, and pie fillings. It is naturally gluten-free, making it a suitable alternative for individuals with gluten intolerance or celiac disease. It can also improve the texture of certain foods by adding smoothness, creaminess, or crispness.

It is available in two main forms: clear and modified. Clear corn starch is a common household variety used for culinary purposes, while modified corn starch undergoes physical or chemical modifications to enhance its properties. When stored properly, corn starch has a long shelf life and remains usable for an extended period. Corn starch is naturally gluten-free, making it a suitable alternative for individuals with gluten intolerance or celiac disease.

It can be used as a substitute for wheat flour and as a thickening agent in gluten-free recipes.

Corn starch is primarily used as a thickener in various culinary preparations. When heated in the presence of liquid, the starch granules absorb the liquid and swell, resulting in the thickening of the mixture. It is commonly used in soups, sauces, gravies, puddings, and pie fillings to achieve the desired consistency.

Several sectors, including paper, textiles, adhesives, and medicines, use maize starch. Additionally, it serves as a dusting agent for several industrial processes and is utilized in the manufacture of bio-plastics. It is used to stabilize sauces and gravies, enhance the texture and structure of baked goods, and coat fried meals. It may be used to thicken custards, puddings, and pie fillings. It can also be used in cookie and cake recipes to make them lighter and more soft. It may also be used in fried meals as a coating to add a crispy, crunchy exterior.
